

Psalms 113:3

"From sunrise to sunset, let the LORD's name be praised!"

Edited Photo

Details: No crop was needed but enhanced the saturation as well as the darkness. Used the "blue mood" filter to change the warmth of the sunset colors. Rule of thirds was still used so then the sun is the main part of the photo. 7 in x 5 in with 183 pixels per inch.

Original Photo

Details: Taken from a bridge far away from the tree line. Rule of thirds was used unintentionally. The lighting was natural with no edits or filters. This photo was taken on my iPhone 12.

The Handsome "ist" Boy Ever

Edited Photo

Details: Cropped to become closer to the subject (my dog Beau). The photo kept the same perspective of point of view above him to make him look up. Enhanced the saturation to make his fur colors pop. Used a "Dark Fade" filter to make the picture darker and mainly focused on his colors. 5 in x 7 in with 215 pixels per inch.

Original Photo

Details: This was taken inside with natural lighting from a sliding glass door. Point of view shot above him to make him look up at the camera. The only setting this photo already has is potriat that was taken on an Iphone 15 plus, which makes the background blurred and the subject clearer.

The Softball Field Flower

Edited Photo

Details: Cropped was needed to make the perspective symmetrical. Used the filter "Dark Fade" to show the characteristics of the petals. Enhanced the saturation and the darkness of the whole photo. Took the lasso tool to make the background a little bit more blurred than before. 5 in x 7 in with 178 pixels per inch.

Original Photo

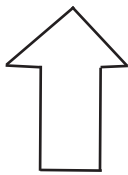

Details: This was taken outside on a cloudy day. The camera was above the flower whenever it was taken using the grass behind as the background. Portrait was used to blur the background as well to make the flower the main focus point. This was taken on an Iphone 12.

The Best Looking Player

Edited Photo

Details: The crop was needed making Tanner (the player) the center of attention. Using the lasso tool was able to fade and blur the players around him then enhance and brighten Tanner in front. Enhanced the saturation throughout the whole photo. Was taken on a professional camera about 20 yards away. 5 in x 7 in with 220 pixels.

Original Photo

Details: Taken after football game with the lighting from the stands. Professional camera took photo making the resolution clear. Multiple subjects making it unclear who the main perspective is.
